

## Product overview

The VariCap is an impalement protection cap that was designed by a retired and frustrated union laborer. This Cal/OSHA approved, and Federal OSHA compliant safety device is intended to protect workers from lacerations and falls from height.

## Uses

The VariCap can be used to cover impalement hazards below grade and up to 7 ½ feet above the ground. It can be used on rebar #4-#11.

## Description

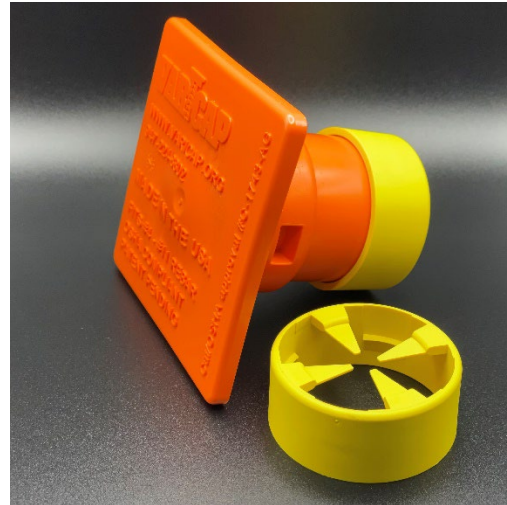

- Steel over molded plastic impalement cover
- Highly visible Orange and Yellow coloring
- Rated for 250lbs dropped from 10 feet
- Patented design

## Benefits

- Up to 300% faster to install than typical rebar caps
- Will not fall off!
- Removes with ease
- Zero maintenance cost
- Does not deform when installed on protrusion
- Will last over 1000 uses in most cases and not need to be replaced
- Installs on vertical and horizontal hazards
- No unwanted exposures/OSHA violations because it stays on
- Workers won't get frustrated re-installing caps that have repeatedly fallen off
- Install them once and move onto your next task
- No phone calls about exposed hazards
- Patented design keeps the cap centered on the bar every time you use it
- The VariCap is a manageable asset not a consumable

## Made in the USA!

The VariCap is made in Michigan. First, we make the steel molded insert in Jackson, MI. Next, we ship the inserts down the street to our manufacturing plant where they are set into a rapid injection molding press. The steel is over molded into the orange base. We then injection mold the yellow end cap which is snapped onto the base to create the finished product.

## Compliance

- CALOSHA 344.90, 1505, 1712
  - #C-1743-AG
- Federal OSHA 1926.701 (b)

## Ordering instructions

- Impalement caps come in 50 piece boxes
- Replacement (yellow) end caps come in 40 piece boxes
- We can ship anywhere in the country!
